## NOTES TO USERS

This map is for use in administering the National Flood Insurance Program. It does not necessarily identify all areas subject to flooding, particularly from local drainage sources of small size. The community map repository should be consulted for possible updated or additional flood hazard information.

To obtain more detailed information in areas where **Base Flood Elevations** (BFEs) and/or **floodways** have been determined, users are encouraged to consult the Flood Profiles and Floodway Data and/or Summary of Stillwater Elevations tables contained within the Flood Insurance Study (FIS) report that accompanies this FIRM. Users should be aware that BFEs shown on the FIRM represent rounded whole-foot elevations. These BFEs are intended for flood insurance rating purposes only and should not be used as the sole source of flood elevation information. Accordingly, flood elevation data presented in the FIS report should be utilized in conjunction with the FIRM for purposes of construction and/or floodplain management.

**Coastal Base Flood Elevations** shown on this map apply only landward of 0.0' North American Vertical Datum (NAVD). Users of this FIRM should be aware that coastal flood elevations are also provided in the Summary of Stillwater Elevations table in the Flood Insurance Study report for this jurisdiction. Elevations shown in the Summary of Stillwater Elevations table should be used for construction and/or floodplain management purposes when they are higher than the elevations shown on this FIRM.

Boundaries of the **floodways** were computed at cross sections and interpolated between cross sections. The floodways were based on hydraulic considerations with regard to requirements of the National Flood Insurance Program. Floodway widths and other pertinent floodway data are provided in the Flood Insurance Study report for this jurisdiction.

Certain areas not in Special Flood Hazard Areas may be protected by flood control structures. Refer to Section 2.4 "Flood Protection Measures" of the Flood Insurance Study report for information on flood control structures in this jurisdiction.

The projection used in the preparation of this map is State Plane Utah South 4303. The horizontal datum was NAD 83, GRS 1980, spheroid. Differences in datum, spheroid or projection used in the production of FIRMs for adjacent jurisdictions may result in slight positional differences in map features across jurisdiction boundaries. These differences do not affect the accuracy of this FIRM.

Flood elevations on this map are referenced to North American Vertical Datum of 1988. These flood elevations must be compared to structure and ground elevations referenced to the same vertical datum. For information regarding conversion between the National Geodetic Vertical Datum of 1929 and the North American Vertical Datum of 1988, visit the National Geodetic Survey website at http://www.ngs.noaa.gov/ or contact the National Geodetic Survey at the following address:

NGS Information Services NOAA, N/NGS 12 National Geodetic Society SSMC-3, #9202 1315 East-West Highway Silver Spring, Maryland 20910-3282 (301) 713-3242 (301) 713-4172 (fax)

To obtain current elevation, description, and/or location information for bench marks shown on this map, please contact the Information Services Branch of the National Geodetic Survey at (301) 713-3242, or visit their website at http://www.ngs.noaa.gov/.

**Base map** information shown on this FIRM was provided in digital format by the U.S. Farm Service National Agriculture Imagery Program (NAIP), dated summer 2006, and produced at a scale of 1:40,000. The data was obtained from the State Geographic Information Dataset (SGID) maintained by the Automated Geographic Reference Center (AGRC).

This map reflects more detailed and up-to-date stream channel configurations than those shown on the previous FIRM for this jurisdiction. The floodplains and floodways that were transferred from the previous FIRM may have been adjusted to conform to these new stream channel configurations. As a result, the Flood Profiles and Floodway Data tables in the Flood Insurance Study report may reflect stream channel distances that differ from what is shown on this map.

The "profile base lines" depicted on this map represent the hydraulic modeling baselines that match the flood profiles in the FIS report. As a result of improved topographic data, the "profile base line", in some cases, may deviate significantly from the channel centerline or appear outside the SFHA.

Corporate limits shown on this map are based on the best data available at the time of publication. Because changes due to annexations or de-annexations may have occurred after this map was published, map users should contact appropriate community officials to verify current corporate limit locations.

Please refer to the separately printed **Map Index** for an overview map showing the layout of map panels for this jurisdiction.

Contact the FEMA Map Service Center at 1-800-358-9616 for information on available products associated with this FIRM. Available products may include previously issued Letters of Map Change, a Flood Insurance Study report, and/or digital versions of this map. The FEMA Map Service Center may also be reached by Fax at 1-800-358-9620 and its website at http://www.msc.fema.gov/.

If you have questions about this map or questions concerning the National Flood Insurance Program in general, please call **1-877-FEMA MAP** (1-877-336-2627) or visit the FEMA website at http://www.fema.gov/.

LEGEND         SPECIAL FLOOD HAZARD AREAS (SFHAS) SUBJECT OD NUNDATION BY THE 1% ANNUAL CHANCE FLOOD         Annual chance flood (100-year flood), also known as the base flood, is the flood that after as a 1% chance of being equaled or exceeded in any given year. The Special Flood Hazard Area is the area subject to flooding by the 1% annual chance flood. X-reas of Special Flood Hazard Area is the area subject to flood give the 3% annual chance flood.         ZONE A       No Base Flood Elevations determined.         ZONE AF       Base Flood Elevations determined.         ZONE AF       Elood depths of 1 to 3 feet (usually areas of ponding); Base Flood Elevation at the doremined.         ZONE AF       Elood depths of 1 to 3 feet (usually sheet flow on sloping terrain); average depths determined.         ZONE AF       Flood depths of 1 to 3 reas of alluvial fan flooding, velocities also determined.         ZONE AF       Plood depths of 1 to 3 reas of alluvial fan flooding, velocities also determined.         CONE AF       Plood depths of 1 to 3 reas of alluvial fan flooding, velocities also determined.         CONE AF       Plood depths of 1 to 3 reas of alluvial fan flooding, velocities also determined.         CONE AF       Conscial flood thazard Area formerly protected from the 1% annual chance flood by a flood control system that was subsequently decertified. Zone AR         Moto Control system under construction, no Base Flood Elevations determined.       Protection system under construction, no Base Flood Elevatione         Moto Control system under construct
INUNDATION BY THE 1% ANNUAL CHANCE FLOOD         INUNDATION BY THE 1% ANNUAL CHANCE FLOOD         The 1% annual chance flood (100-year flood), also known as the base flood, is the flood that has a 1% chance of being equaled or exceeded in any given year. The Special Flood Hazard Area is the area subject to flooding by the 1% annual chance flood. Areas of Special Flood Hazard include Zones A, AE, AH, AO, AR, A99, V, and VE. The Base Flood Elevation is the water-surface elevation of the 1% annual chance flood.         ZONE A       No Base Flood Elevations determined.         ZONE AE       Base Flood Elevations determined.         ZONE AH       Flood depths of 1 to 3 feet (usually areas of ponding); Base Flood Elevations determined.         ZONE AO       Flood depths of 1 to 3 feet (usually sheet flow on sloping terrain); average depths determined.         ZONE AR       Special Flood Hazard Area formerly protected from the 1% annual chance flood by a flood control system that was subsequently decertified. Zone AR indicates that the former flood control system is being restored to provide protection from the 1% annual chance or greater flood.         ZONE A99       Area to be protected from 1% annual chance flood by a Federal flood grotection system under construction; no Base Flood Elevations determined.         ZONE VE       Coastal flood zone with velocity hazard (wave action); Base Flood Elevations determined.         ZONE A99       Area to be protected from 1% annual chance flood by a Federal flood grotection system under construction; no Base Flood Elevations determined.         ZONE VE
